Director's Notes - April 2011

While on a recent visit to the San Diego Zoo, I was reminded that the strengths of one complement the other. One animal was powerful, another graceful, and another beautiful. The analogy can be carried forth to the Biomedical Library and the University as a whole. The Biomedical Library is composed of units that work together to help meet the information needs of our users. When contacted in person, by phone, by chat, by e-mail, etc, the personnel at the Reference Desk strive to help users find the information needed. The Circulation Desk personnel provide directions, check out study rooms and sometimes just lend a listening ear. The Education Department provides instruction in the use of the Biomedical Library resources. The Technology Librarian strives to keep the BL and the University faculty abreast of the latest useful technology and the Outreach Librarian promotes quality information to the University community and the public. The Interlibrary Loan Department locates articles and books needed by our users, but not in our collection. The Collection Management Department orders materials and organizes them in a "findable" manner. The Systems Department keeps the computers operational. And the sites at the USAMC and the C&W hospitals provided the specialized information needed for their user group. The Biomedical Library has several specialized departments and individuals that combine their strengths to provide efficient access to quality information. Let these departments know how they can help you find the information you need.

Library Subscribes to Nursing Reference Center

After an evaluation of *Nursing Reference Center™* (NRC) with the faculty of the College of Nursing, the Biomedical Library has subscribed to NRC. NRC is a comprehensive reference tool designed to provide relevant clinical resources to nurses and other health care professionals, directly at the point-of-care.

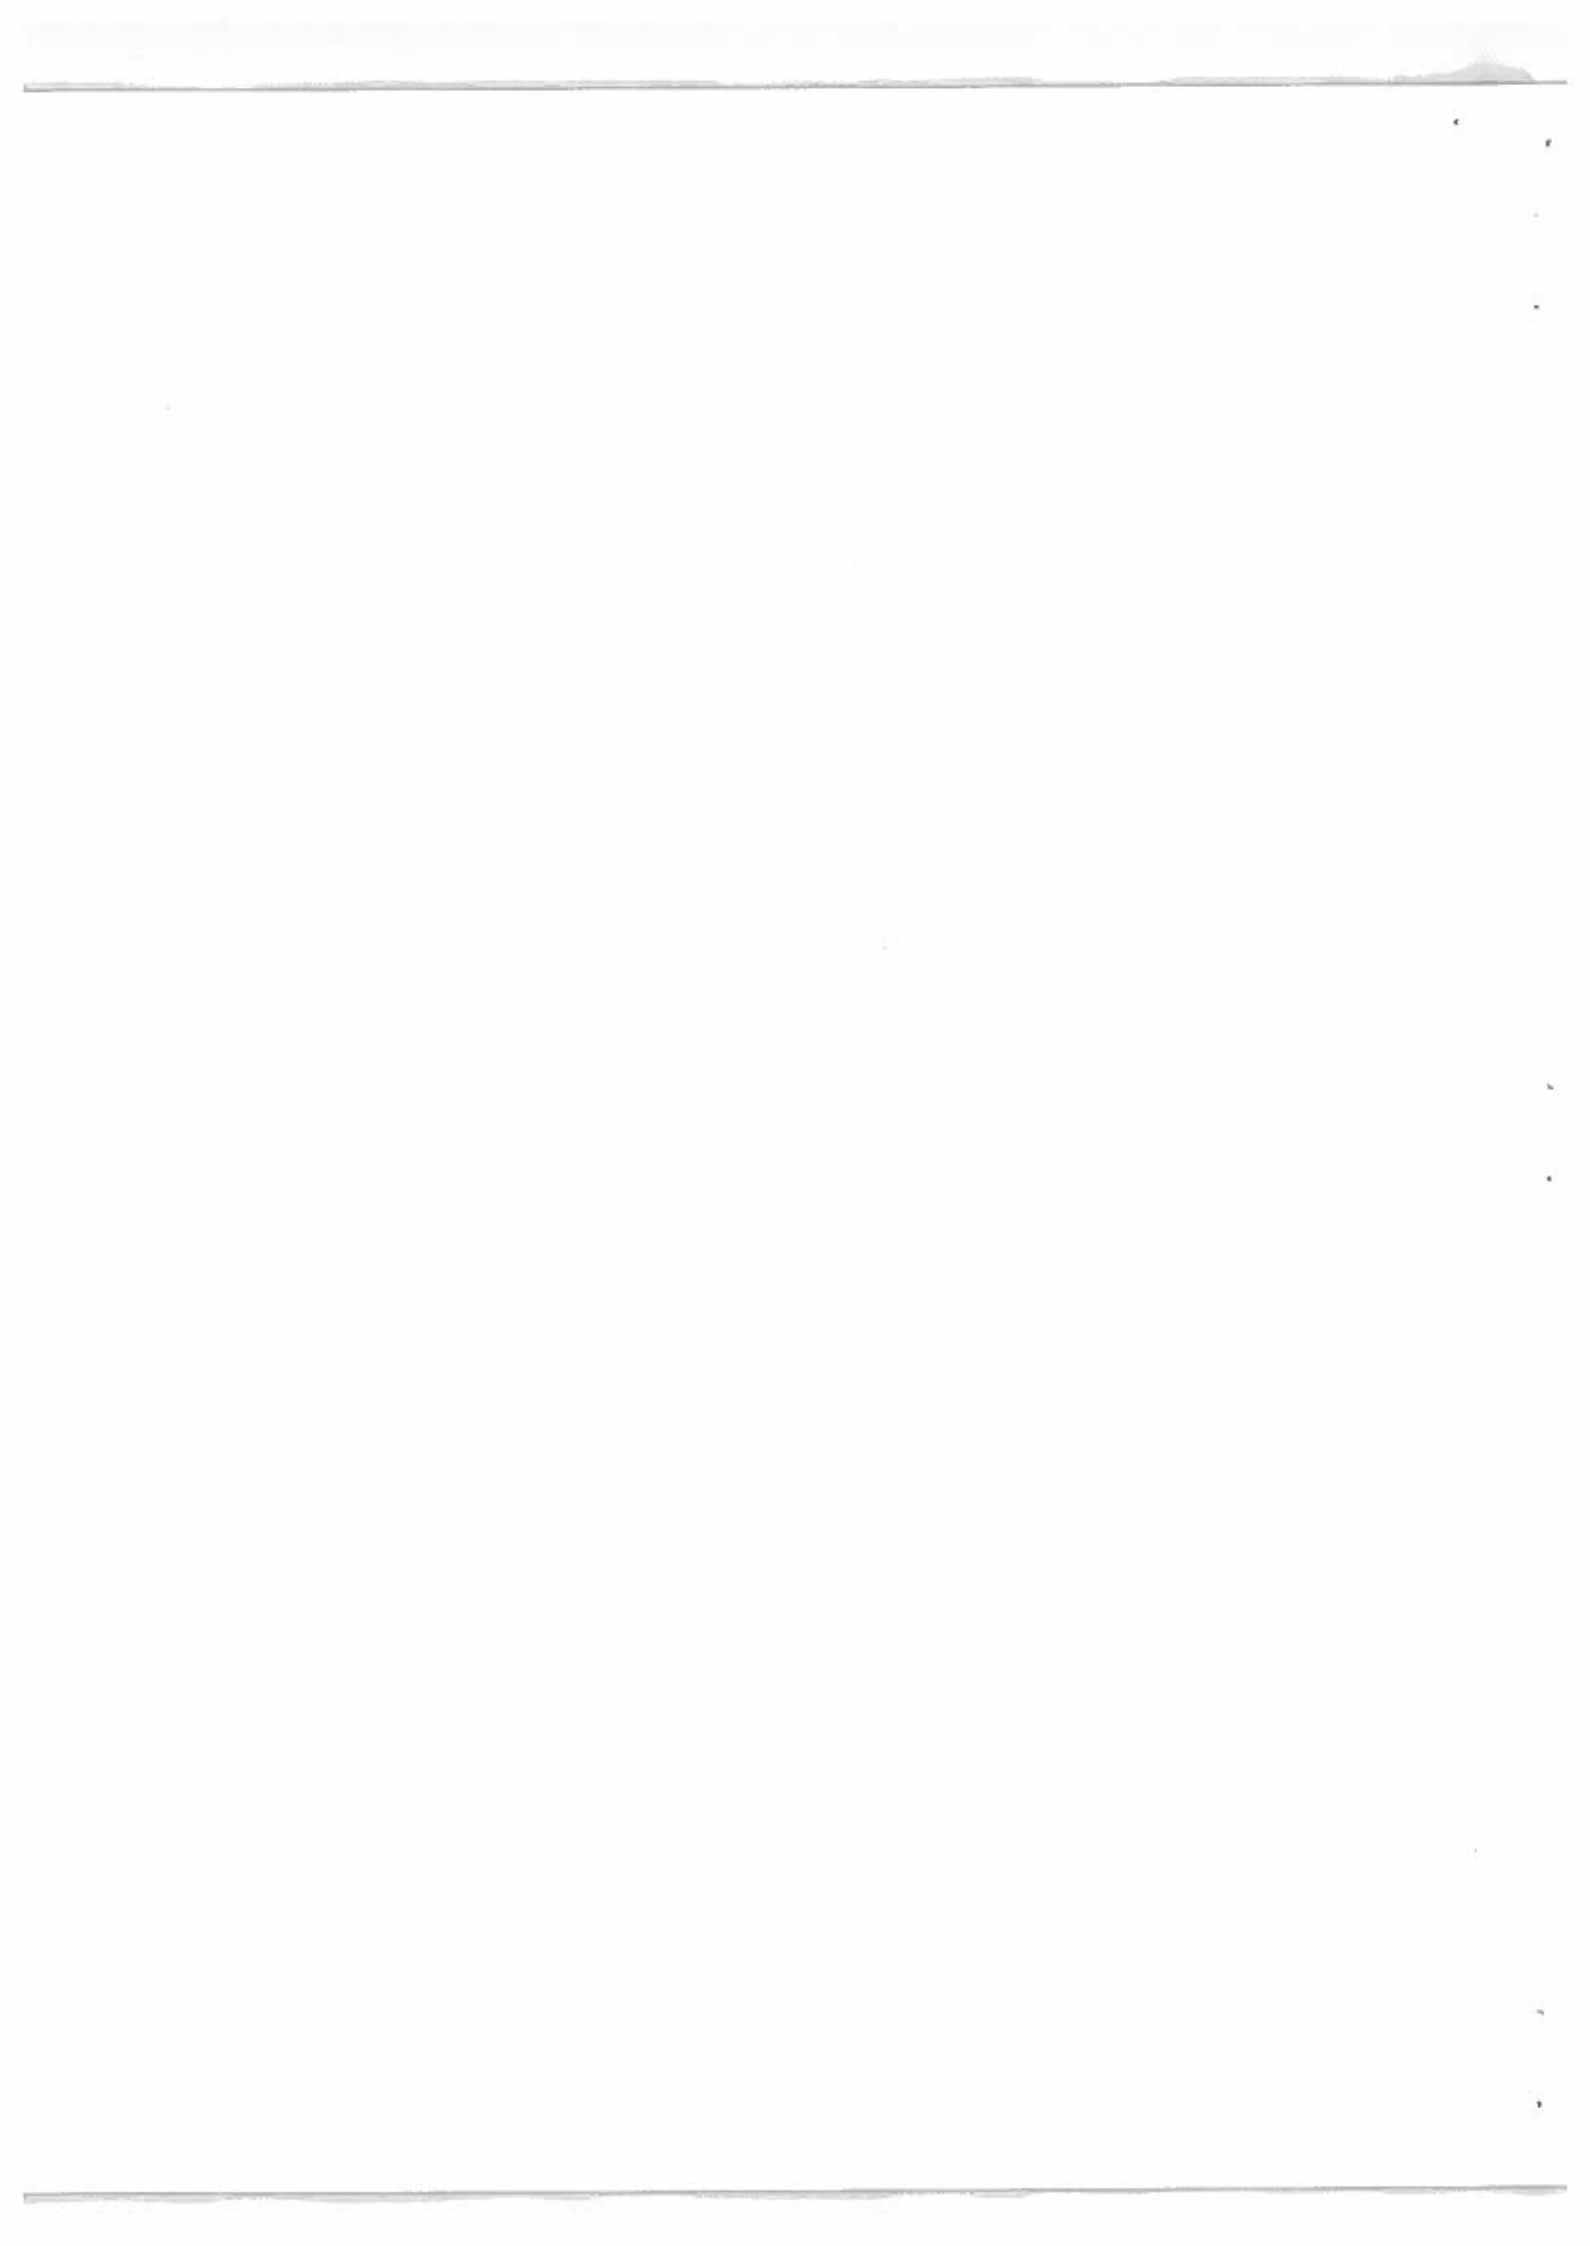

NRC features:

- Clinically organized quick lessons
- Evidence-based care sheets
- Continuing education modules
- Point-of-care drug information
- Patient education
- Best practice guidelines
- Detailed medical illustrations
- The latest medical news
- Legal cases
- Research instruments
- Unique point-of-care reference books

This database offers most recent clinical evidence available from thousands of full-text documents. It is also linked to CINAHL Plus with Full Text. Go to our Database List to access Nursing Reference Center.

Updates to Exam Master Online

In order to function as a concise, "high-efficiency" test preparation tool for the USMLE Step 1 Exam, Exam Master Online has revised its Board Review for USMLE Step 1, with the addition of over 450 new questions to 2400 updated questions, all of which contain explanations. Furthermore, there are supplementary materials for extra study, numerous images and tables, and a concise USMLE Step 1 Content Blueprint. Additional innovations include an updated interface, a flexible exam creator, and a detailed scoring feedback mechanism.

For those unfamiliar with this excellent and multi-faceted resource, Exam Master Online is an exam preparation tool, offering study materials for the USMLE, PANCE, NAPLEX, NBDE, plus certain certification exams [internal medicine, family medicine, general surgery, and general pediatrics]. Furthermore, a Medical Subject Review section has study materials arranged by discipline for anatomy, biochemistry, cytology, histology, internal and clinical medicine, medical microbiology, pathology, physiology, and psychiatry.

Exam Master Online may be accessed via the Database List link on the Biomedical Library home page. It is available at no cost to current USA students, faculty, and staff, although a free registration is required.

New MeSH interface for PubMed - Spring 2011

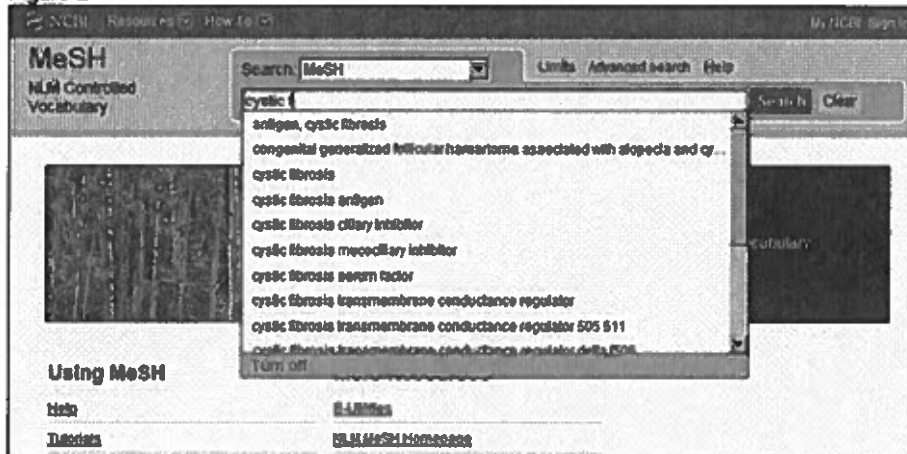

MeSH, the National Library of Medicine controlled vocabulary used for indexing articles for PubMed, has been redesigned to provide users with the same streamlined interface now available in PubMed® and the NLM® Catalog (see Figure 1).

Figure 1

You will first notice that when typing a term into the MeSH search box that an Autocomplete feature has been added and now replaces the "Suggestions" feature (see Figure 2).

Figure 2

To build a PubMed search from MeSH and to run a search, select terms using the check boxes,

Search

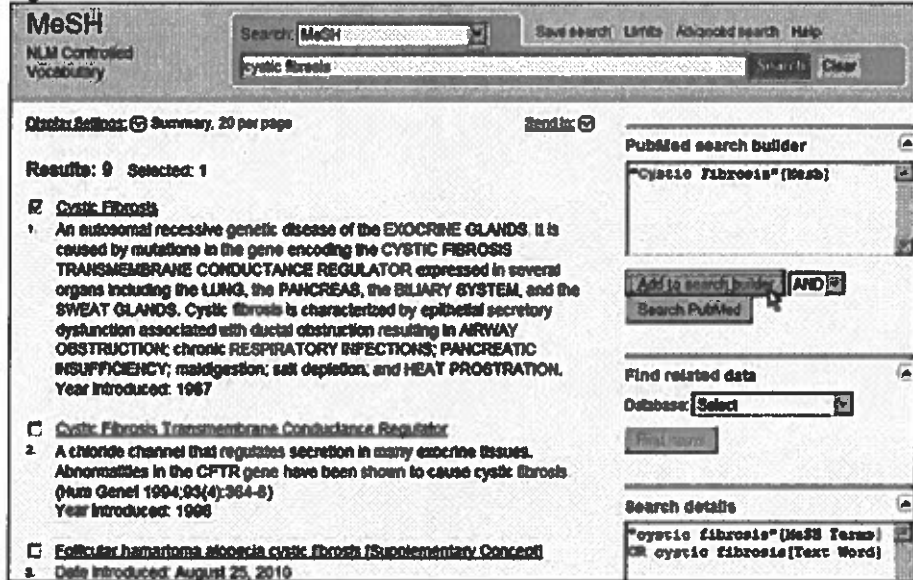

Search this site:

Search

Site Index

and then click "Add to search builder" in the PubMed search builder to the right of the results. You may continue searching and including additional terms to the PubMed search builder using "Add to search builder" and the Boolean pull-down menu. When you are finished, click "Search PubMed." (see Figure 3).

Figure 3

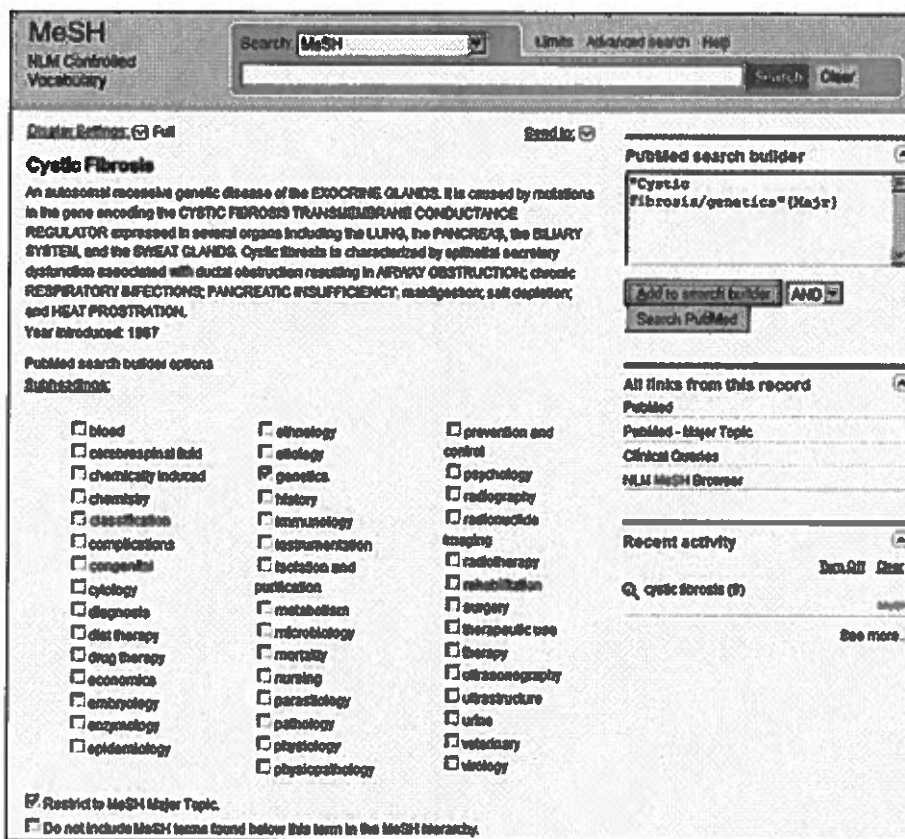

To add subheadings or specific search requirements for terms, click the term from the Summary display to view the Full display, and then check the required selections, for example, Restrict to MeSH Major Topic (see Figure 4) before clicking Add to search builder.

When viewing the MeSH record in the Full format, you can search the terms in PubMed, Clinical Queries, and the NLM MeSH Browser using the links under "All links from this record." If, however, you select check boxes, for example, for subheadings, you must use the search builder as described above. (see Figure 3).

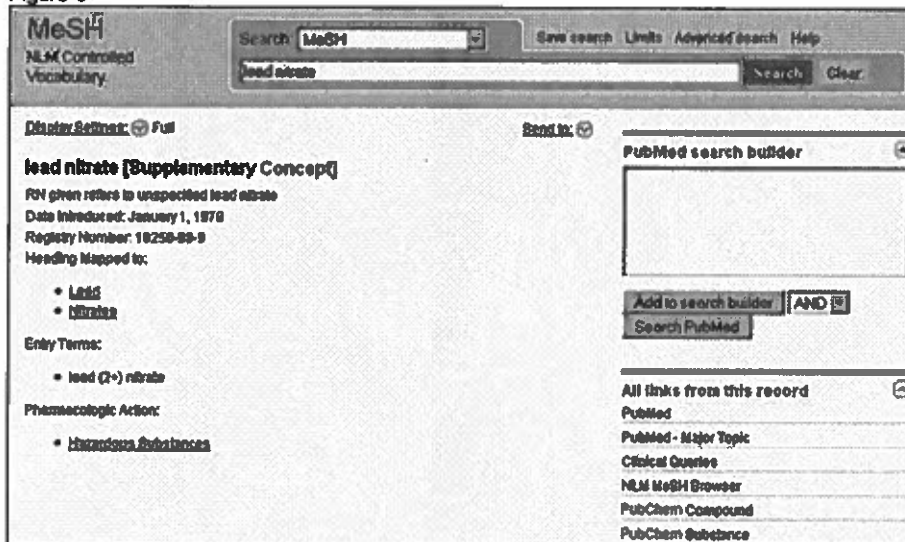

Figure 4

The Substance Name field was renamed to Supplementary Concepts; terms will be tagged with the new name, for example, lead nitrate [Supplementary Concept] (see Figure 5).
